About Me

I'm an experienced Project Manager with over 15 years of expertise bridging customer requirements and technical implementation.

A skilled communicator and attentive listener with a talent for resolving conflicts and strong organizational abilities that ensure successful project delivery.

Highly motivated and outgoing professional with a solid background in IT, Cloud, Data Analysis, and AI.

A supportive coach who thrives on inspiring and empowering colleagues to achieve their best.

Work Experience

Project Manager | IT & AI

Avvale SPA

2021
-
now

- Managing projects focused on Data Management and Data Analytics initiatives.
- Leading projects leveraging AI and Machine Learning technologies to support customers in their digital transformation journey.
- Managing complex projects for Fortune 500 clients.
- Directly managing teams of 50+ people.
- Managing relationships and communications between the company, customers, and third parties (commercial, technical, operations, suppliers, and international clients) throughout the project lifecycle.
- Planning and overseeing activities, priorities, budgets, risks, and critical issues through regular meetings and formal project management documentation (Gantt charts, kick-off presentations, status reports, risk analyses, post-project reviews, lessons learned reports) in line with Scrum, PMI, and PRINCE2 frameworks.

Client Project Manager

NTT Data SPA

2019
-
2021

- Managing digital transformation initiatives for Fortune 500 clients through cloud-based solutions and emerging technologies.
- Planning and overseeing activities, priorities, budgets, risks, and critical issues to ensure successful project delivery

Cloud Delivery Manager & Scrum Master

Irideos SPA

2015
-
2019

- Scrum Master, coordinating and supporting the delivery team throughout the project lifecycle.
- Coordinating resources and stakeholders to ensure projects are delivered on time.

Support Team Manager

Enter Srl

2013
-
2015

- Escalation Point for VIP Customer
- Provide Technical assistance on Cloud environments

Network Administrator

Enter Srl

2011
-
2013

- Troubleshooting on network and security issues for customers

Procurement Data Hub (external services – Energy Company)

Budget: €2M – €5M

As a Project Manager, I led a team of 50 professionals in the successful development and deployment of the Procurement Data Hub for our customer.

The project aimed to centralize procurement data from multiple sources, including Microsoft Access, SAP, Oracle, and other databases, into a unified Azure Data Platform leveraging both Infrastructure-as-a-Service (IaaS) and Platform-as-a-Service (PaaS) solutions.

My role encompassed end-to-end project coordination, ensuring that the assessment, analysis, development, and deployment phases were executed efficiently while aligning with the customer’s expectations and business goals.

Key Responsibilities:

- Infrastructure Assessment: Led a comprehensive evaluation of the customer’s on-prem infrastructure to understand system dependencies and data flows.
- Solution Analysis & Design: Coordinated the definition of the "to-be" solution, ensuring the architecture aligned with business needs and technical best practices.
- Development & Implementation: Oversaw the coding process, database integrations, and the creation of reports and dashboards tailored to customer requirements.
- Stakeholder Management: Acted as the primary point of contact between technical teams, business stakeholders, and senior leadership, ensuring smooth communication and alignment.
- Quality Assurance & Delivery: Ensured the final solution met performance, scalability, and security standards before deployment.

Outcome & Impact: The successful implementation of the Procurement DataHub provided the customer with a single source of truth for procurement data, improving data accuracy, reporting capabilities, and decision-making efficiency. By migrating to the AzureData Platform, the organization gained a scalable, secure, and future-proof solution that streamlined procurement operations and enabled advanced data analytics. This project not only optimized the customer’s data management strategy but also enhanced their operational agility, allowing them to respond more effectively to business needs.

On-prem to Azure Cloud Migration (external services – Eyewear Company)

Budget: €1M – €2M

As a Project Manager, I led a global team of 14 professionals in successfully migrating 50 on-premises servers and 20 applications to Microsoft Azure.

This large-scale migration required extensive functional analysis and architectural design to ensure a seamless transitionwhile maintaining systemperformance, security, and business continuity.

My primary role was to oversee the entire migration process, ensuring that all technical and strategic goals were met within scope, timeline, and budget.

Key Responsibilities:

- Project Planning & Coordination: Defined project scope, milestones, and timelines while aligning cross-functional teams;
- Functional & Architectural Design: Led the assessment of existing infrastructure, ensuring a well-structured cloud environment in Microsoft Azure;
- Team Management: Facilitated collaboration among engineers, architects, and stakeholders across multiple regions;
- Migration Execution: Oversaw the step-by-step migration process, mitigating risks and resolving challenges proactively;
- Stakeholder Communication: Maintained clear and consistent updates to leadership and technical teams to ensure alignment.

Outcome & Impact: The successful migration of all 50 servers and 20 applications to Microsoft Azure resulted in improved scalability, security, and operational efficiency for the organization.

By transitioning from on-premises infrastructure to the cloud, the company reduced maintenance costs, enhanced systemperformance, and leveraged Azure’s advanced capabilities for future growth.

EnterCloudSuite (Internal services – Service Provider’s company)

Budget: up to €1M

As a Project Manager, I led a team of nine professionals in the development of a new cloud-based service for Irideos SPA (previously Enter srl).

The goal of the project was to create a user-friendly graphical interface that would enable end customers to autonomously manage their virtual machines. My role encompassed end-to-end project coordination, ensuring that technical and business objectives aligned throughout the development cycle. I facilitated cross-functional collaboration between developers, UI/UXdesigners, and infrastructure engineers, overseeing the integration of cloud computing technologies with an intuitive user interface.

Key responsibilities included:

- Defining project scope, objectives, and milestones;
- Managing timelines, budgets, and resource allocation;
- Leading agile methodologies to ensure iterative development and quick adaptability to changes;
- Coordinating communication between stakeholders, including executive leadership and development teams;

Outcome & Impact: The successful execution of EnterCloudSuite resulted in a robust and scalable cloud management platform, enhancing our company’s service offerings and empowering customers with greater autonomy over their cloud environments. The project not only strengthened the company’s market position but also improved operational efficiency for both internal teams and external users.
